

Figma Prototype Instructions

1. Create a new Figma file "Campus Entry Auth — Lo-fi Phase 1".
2. Import 06_Prototype/screens/S01_...S20_... .png (drag all 20 onto the canvas). Figma creates one frame per image.
3. Resize frames: phone/user-indicator screens (S01–S04, S14, S15, S18) to 480×900; tablet/web screens (S05–S13, S16, S17, S19, S20) to 1440×900.
4. Arrange in rows by surface: Row 1 user indicator (S01–S04), Row 2 guard tablet results (S05–S09), Row 3 guard tablet states (S10–S12, S16), Row 4 visitor (S13–S15), Row 5 admin/student (S17–S20).
5. Switch to Prototype tab. Add hotspots per the flow map (report Section 35.3):
 - S01 → S02 → S03 (on tap / after delay 800 ms) → S04 and S05 (open S05 as overlay on a second "guard" flow, or link S04 → S05 for a single walkthrough)
 - S05 [Mismatch] → S09; S06/S07/S08/S09 [Done] → S16
 - S16 [Visitor without approval] → S13 (guard variant) → S14 → S15 → S02
 - S16 "reader fault" hotspot → S10; "offline" hotspot → S11; S11 "limit reached" → S12
 - S17 [Revoke] → confirm overlay (same frame) → S17; S18 [Report and disable] → S18 result state (duplicate frame)
 - S19 [Re-identify] → overlay; S20 policy [Apply] → confirm overlay
6. Set S01 as the flow starting point; add a second flow starting at S16 ("Guard") and a third at S17 ("Admin").
7. Use "Smart animate / instant" transitions; dialogs as "Open overlay, centered, close on click outside".
8. Share with "Anyone with link can view" for the poster QR code; keep editing restricted to the team.
